

629/RO cobra

design elio martinelli, 1968

This lamp is held into a sphere, two horizontal tops separate the reflector from the base. The reflector's rotatory movement around the central articulation constantly describes new spheres. A sinuous, dynamic and agile shape, like a cobra that swings hypnotized by the music but ready to spring. The lamp has been designed and produced in 1968, molded with a single material, a thermosetting resin, and available in bright colors, white or black. For the 50th anniversary of its production, it is proposed with the designer's signature in a new red color.
